Review-Ready Submission

Beginning in 2018, all American Chemical Society (ACS) journals have simplified their formatting requirements in favor of a streamlined and standardized review-ready format for an initial manuscript submission. This change allows authors to focus on the scientific content needed for efficient review rather than on formatting concerns. It will also help ensure that reviewers are able to focus on the scientific merit of a submission during the peer review process. Review-Ready Submission will also reduce the effort needed to revise formatting should a manuscript be transferred as a submission to a different ACS journal. Authors will be asked to attend to any journal-specific formatting requirements during manuscript revision.

Manuscripts submitted for initial consideration must adhere to these standards:

- Submissions must be complete with clearly identified standard sections used to report original research, free of annotations or highlights, and include all numbered and labeled components.
- Figures, charts, tables, schemes, and equations should be embedded in the text. Separate graphics can be supplied at revision.
- When required by a journal’s structure or length limitations, manuscript templates should be used.
- References can be provided in any style but must be complete, including titles.
- Supporting Information should be submitted as a separate file(s).
- Author names and affiliations on the manuscript must match what is entered into ACS Paragon Plus.
Biochemistry: Scope and Content

Scope
Biochemistry provides an international forum for publishing exceptional, rigorous, high-impact research across all of biological chemistry. This broad scope includes studies on the chemical, physical, mechanistic, and/or structural basis of biological or cell function and encompasses the fields of chemical biology, synthetic biology, disease biology, cell biology, nucleic acid biology, neuroscience, structural biology, mechanistic enzymology, and biophysics.

Content
Biochemistry publishes original research in three formats: Communications, Research Articles, and, for the description of new biological chemistry methods, a new format called From the Bench. Biochemistry also publishes review articles, called Perspectives, as well as Viewpoints that focus attention on recent, significant discoveries in the field reported in Biochemistry or elsewhere. All manuscripts are submitted online at http://acsparagonplus.acs.org; choosing a manuscript type is the first step in the online submission process. Templates are available for both Communications (where they are required) and Articles (where they are preferred, but optional).

COMMUNICATIONS. Biochemistry Communications are short manuscripts reserved for high-impact results. They must be prepared using the Biochemistry Communications template (available here). An abstract of up to 250 words is required. All other text (including title, figure/scheme captions, author names and information, acknowledgements, tables, references, etc.) must sum to 3000 words or fewer. Up to four figures/schemes are allowed and there is no limit on the number of tables and references. References should include manuscript titles. The editors will make every effort to facilitate especially rapid publication of Biochemistry Communications by returning initial decisions within three weeks of receipt. A brief statement explaining how the manuscript meets the impact criteria stated above should be included in the cover letter that accompanies the submission. Biochemistry Communications must include a a Table of Contents graphic. Detailed Experimental Procedures should be included in a separate Supporting Information document.

RESEARCH ARTICLES. Biochemistry Research Articles describe rigorous, significant, and high-quality advances in biological chemistry that will interest the diverse and contemporary Biochemistry readership. Articles contain an Introduction that places the work in context followed by sections describing Materials and Methods, Results, Discussion, and Conclusions. Results and Discussion may be combined into a single section. Biochemistry Research Articles include an Abstract of fewer than 250 words but
no restrictions with regard to the number of figures, tables, or references. A brief statement explaining why the manuscript is appropriate for *Biochemistry* must be included in the cover letter that accompanies the manuscript. Article submissions prepared without the template should begin with a Cover Page that includes the manuscript title and all author names, with complete contact information for the corresponding author, an Abstract, and a Table of Contents graphic. Display Items (Tables, Schemes, and Figures) along with their legends should be embedded in the main text. All procedures should be described in sufficient detail to allow the results to be reproduced by others. Brief Acknowledgments and References are included at the end of the main text document. References should include manuscript titles.

**FROM THE BENCH.** *Biochemistry* From the Bench submissions are designed to report fundamentally new (or significantly improved) experimental, computational, or bioinformatics methods of interest to members of the biological chemistry community. To enhance the practical relevance of each paper, From the Bench submissions must include a detailed description of the method, including all technical details necessary to ensure reproducibility, and the results of a validation study that demonstrates a clear advantage of the new method when compared to currently available approaches. Application of the method to provide new biological insight is not required.

From the Bench submissions should include a Cover Page that lists the manuscript title and names of all authors, with complete contact information for the corresponding author, an Abstract of 250 words or fewer, and a Table of Contents graphic. The main text of the manuscript should include a 1-2 paragraph Introduction that places the new method in context, followed by a detailed description of how the method was developed, tested, and validated and how it compares with previous approaches. The submission concludes with a step-by-step description that includes all technical details necessary to ensure reproducibility. Display Items (Tables, Schemes, and Figures) along with their legends should be embedded in the main text. Brief Acknowledgments and References are included at the end of the main text document. References should include manuscript titles. An example From the Bench article can be found here.

**PERSPECTIVES.** *Biochemistry* Perspectives are designed to communicate a focused (as opposed to comprehensive) review of the most exciting new developments in a field or area and with an eye toward guiding future research. Topics that have been extensively reviewed recently in other journals will not be considered. Authorship is usually by invitation, but suggestions to the *Biochemistry* editors of both topics and authors are welcome. Please detail in your suggestion how the proposed Perspective will be unique, especially in the context of any related reviews. Submissions should
begin with a Cover Page that includes the manuscript title and all author names, with complete contact information for the corresponding author, an Abstract of 250 words or fewer, and a Table of Contents graphic. Biochemistry Perspectives are should occupy approximately 4-7 pages of printed text with no limit to the number of references or figures. References should include manuscript titles. Biochemistry Perspectives will be peer-reviewed to ensure accuracy and balance and will appear in the front of an issue.

VIEWPOINTS. Biochemistry Viewpoints are designed to inform readers about an especially exciting recent biological chemistry advance that has appeared in Biochemistry or elsewhere, or at a scientific meeting. Most Viewpoints are commissioned, but proposals may be sent to the Editor-in-Chief at eic@biochem.acs.org. Viewpoints may contain up to 1000 words and a maximum of five citations and should be written to ensure accessibility to a non-expert. A Table of Contents graphic is required. The submission of additional figures and artwork is strongly encouraged, to illustrate both specific points made in the piece and the more general context. References should include manuscript titles. Viewpoints are not peer reviewed but will be evaluated by a member of the editorial board prior to publication. Minor revisions for clarity or adherence to author guidelines may be requested. Upon submission of a Viewpoint, please indicate the editor who commissioned your submission as the preferred editor.

ADDITIONS/CORRECTIONS. Additions and Corrections may be used to address important issues or to correct errors and omissions of consequence that arise after publication of an article. Additions and Corrections may be requested by the author(s) or initiated by the Editor after discussions with the corresponding author. Readers who detect errors of consequence in the work of others should contact the corresponding author of that work. The publication of all Additions and Corrections is subject to approval by the Editor, and minor corrections and additions will not be published. Additions and Corrections should be submitted online, by the corresponding author, at http://acsparagonplus.acs.org. The corresponding author should obtain approval from all of the article co-authors prior to submitting an Addition and Correction or provide evidence that such approval was solicited. The Addition and Correction should include the original article title and author list, citation including DOI, and details of the correction. For proper formatting, see examples in a current issue of Biochemistry.

RETRACTIONS. Articles may be retracted for scientific or ethical reasons. Articles that contain seriously flawed or erroneous data such that their findings and conclusions cannot be relied upon may be retracted in order to correct the scientific record. Retractions may be requested by the article author(s) or by the journal Editor but are ultimately published at the discretion of the Editor. When an article is retracted, a notice of Retraction will be published containing information about the original article title,
author list, and the reason for the Retraction. Retracted articles will be marked as “Retracted” and be accompanied by the related Retraction notice. The originally published article will remain on the web except in extraordinary circumstances (e.g. where deemed legally necessary, or if the availability of the published content poses a public health risk). The American Chemical Society follows guidance from the Committee on Publication Ethics (COPE) when considering retractions; for more information see http://publicationethics.org/.

**EXPRESSIONS OF CONCERN.** The ACS follows guidance from the Committee on Publication Ethics (COPE) when considering expressions of concern; for more information see http://publicationethics.org/. In accordance with COPE guidelines, expressions of concern may be issued if:

- there is inconclusive evidence of research or publication misconduct by the authors;
- there is evidence that the findings are unreliable but the authors’ institution will not investigate the case;
- an investigation into alleged misconduct related to the publication either has not been or would not be fair and impartial or conclusive;
- an investigation is underway but a judgment will not be available for a considerable time.

Expressions of concern are published at the discretion of the Editor-in-Chief. Upon completion of any related investigation, and when a final determination is made about the outcome of the article, the expression of concern may be replaced with a retraction notice or correction.
CORRESPONDENCE/REBUTTAL. Biochemistry Correspondence/Rebuttal manuscripts provide a forum for scholarly commentary on research papers published in the journal. Both the submitted commentary on a published article and a response to the comments by the authors of the original manuscript will be published together. The Correspondence and the Rebuttal are both limited to 1000 words. Supporting Information is not allowed. The correspondence must raise scientific or technical questions about an article and must be submitted within 6 months of the date of publication of the original article. The author(s) of the original article will be allowed to respond. Correspondence/Rebuttal on previously published Correspondence/Rebuttal will not be considered. Personal invective will not be tolerated. Correspondence/Rebuttal is peer-reviewed at the option of the Editor. Financial interests and funding sources that might detract from an author’s objectivity should be disclosed in the cover letter. The editors will determine whether the material disclosed to them should be published as part of the paper.

Biochemistry: Ethical Guidelines

Anonymity of Peer Review
Editors, reviewers, and authors are expected to adhere to the standards embodied in the ACS Statement on Ethical Guidelines to Publication of Chemical Research. The American Chemical Society fully supports the tenets of anonymous peer review and discourages attempts to determine reviewer identity.

Naming Authors and Co-Authors
During manuscript submission, the submitting author must provide contact information (full name, email address, institutional affiliation, and mailing address) for all co-authors. The author who submits the manuscript for publication accepts the responsibility of notifying all co-authors that the manuscript is being submitted. Deletion of an author after the manuscript has been submitted requires a confirming letter to the Editor-in-Chief from the author whose name is being deleted. For more information on ethical responsibilities of authors, see the ACS Statement on Ethical Guidelines to Publication of Chemical Research.

Disclosing Conflicts of Interest
A statement describing any financial conflicts of interest or lack thereof is published with each manuscript. The corresponding author must submit on behalf of all authors a statement describing all potential sources of bias, including affiliations, funding sources, and financial or management relationships, that may constitute conflicts of interest. For further information, please see the ACS Statement on Ethical Guidelines to Publication of Chemical Research.
of Chemical Research. If no conflict of interest is declared, the following statement will be published in the article: “The authors declare no competing financial interest.”

Availability of Data and Materials
The authors of all manuscripts published by Biochemistry must make materials, data, and protocols available to readers by depositing such materials in a public database. ACS Publications has now partnered with figshare to house all supporting information at acs.figshare.com. Authors may want to further investigate Dryad, or institutional repositories for depositing data. Authors also agree to make available to interested academic researchers, for their own use, any materials reported in the manuscript that are not otherwise obtainable. Any restrictions to the availability of materials or information must be stated at the time of submission.

Deterring Plagiarism
All manuscripts submitted to Biochemistry must describe original research. ACS is committed to deterring plagiarism, including self-plagiarism. ACS Publications uses CrossCheck’s iThenticate software to screen submitted manuscripts for similarity to published material. Submitted manuscripts may be screened before or after peer review. Further information about plagiarism can be found in Part B of the ACS Statement on Ethical Guidelines to Publication of Chemical Research.

Biochemistry: Submission Guidelines

Presubmission Inquiries
Authors who are unsure about the suitability of their research for Biochemistry should submit an email to eic@biochem.acs.org that includes a tentative title and abstract plus a brief statement explaining how the findings will be of interest to the broad Biochemistry readership. Please allow 1-2 days for a response.

Submission
All manuscripts must be submitted online at http://acsparagonplus.acs.org, where detailed instructions and an overview of the submission process are available. ACS Paragon Plus provides authors with state-of-the-art security mechanisms to ensure that all manuscripts and electronic communications remain secure.

Author Names
Because author names are automatically imported into the electronic Journal Publishing Agreement, these names must be entered into ACS Paragon Plus in the same sequence as they appear on the first page of the manuscript. Co-authors are not required to register in ACS Paragon Plus.
**ORCID**

Authors submitting manuscript revisions are required to provide their own personal, validated ORCID iD before completing the submission, if an ORCID iD is not already associated with their ACS Paragon Plus user profiles. This iD may be provided during original manuscript submission or when submitting the manuscript revision. All authors are strongly encouraged to register for an ORCID iD, a unique researcher identifier. The ORCID iD will be displayed in the published article for any author on a manuscript who has a validated ORCID iD associated with ACS when the manuscript is accepted.

With an ORCID iD, you can create a profile of your research activities to distinguish yourself from other researchers with similar names and make it easier for your colleagues to find your publications. If you do not yet have an ORCID iD or wish to associate your existing ORCID iD with your ACS Paragon Plus account, you may do so by following the ORCID-related links in the Email/Name section of your ACS Paragon Plus account. Learn more at [http://www.orcid.org](http://www.orcid.org).

**Funding Sources**

Authors are required to report ALL funding sources and grant/award numbers relevant to each manuscript. Enter all sources of funding for ALL authors relevant to this manuscript in BOTH the Open Funder Registry tool in ACS Paragon Plus and in the manuscript to meet this requirement. See [http://pubs.acs.org/page/4authors/funder_options.html](http://pubs.acs.org/page/4authors/funder_options.html) for complete instructions.

**Institution Identification**

Many Funders and Institutions require that institutional affiliations be identified for all authors listed in the work being submitted. ACS facilitates this requirement by collecting institution information during manuscript submission under Step 2: Authors and Affiliations in ACS Paragon Plus.

**Publishing Agreement**

A properly completed and signed Journal Publishing Agreement (JPA) must be submitted for each manuscript upon submission. ACS Paragon Plus provides an electronic version of the JPA on the My Authoring Activity tab of the corresponding author’s home page once the manuscript has been assigned to an Editor. A PDF version of the JPA is also available, but authors are strongly encouraged to use the electronic JPA. If the PDF version is used, all pages of the signed JPA must be submitted. If the corresponding author cannot or should not complete either the electronic or PDF version for any reason, another author should complete and sign the PDF version of the JPA. After a manuscript is accepted for publication, authors will be presented with a complimentary ACS AuthorChoice license, and if desired, the option to buy up to CC-BY or CC-BYNC-ND. Although an alternate license will be offered after
acceptance, prior to acceptance the JPA is required. For questions or further assistance with ACS AuthorChoice, please reach out to support@services.acs.org.

Cover Letter
Every manuscript submitted to Biochemistry must be accompanied by a cover letter that includes the title of the manuscript, the name of the corresponding author, the type of manuscript submitted, and a paragraph explaining why the manuscript will appeal to the broad Biochemistry readership. The letter should also identify any Supporting Information and/or Review-Only Material and, where appropriate, describe any presubmission communications with an ACS Biochemistry Editor or the Managing Editor.

Biochemistry: Formatting your Submission

General Considerations

TEXT. Manuscripts must be prepared using accepted word-processing software as defined here. LaTeX users should follow the detailed guidelines available at this site.

TABLES. Tables may be prepared in Microsoft Word, Microsoft Excel, or LaTeX and must be embedded in the word-processing file. Authors are asked to number tables consecutively using Arabic numerals and include a descriptive heading that explains the table. Please designate footnotes with a letter and cite in the table by italic superscript letters, labeling sequentially by lines of the table.

GRAPHICS. Manuscripts should be submitted with all graphics embedded in the word-processing document near where they are discussed and would appear in the final publication. Separate graphic files may also be included with the submission package. Additional acceptable file formats for graphics are TIFF, PDF, or EPS (vector artwork). EPS is preferred for line-art figures. TIFF files are preferred for photographs.

COLORS. Choose colors that will allow all features to be clearly visible on white paper, and format using RGB colors. The RGB requirements are essential for producing high-quality graphics within the published manuscript. Graphics submitted using CMYK colors may be used; however, the colors may appear different in the final output.

NAMING, NUMBERING, LETTERING. All graphics should be numbered consecutively beginning with Figure 1 and using Arabic numerals. Boldface Arabic numerals should be used for numbering structures. Lettering should be ≥6 points, and lines should have
≥0.5-point thickness at final printed size. Lettering and lines should be of uniform density and size. Size. Submit graphics at the required print publication size. Single-column figures must be ≤8.4 cm wide. Double-column figures must be ≤17.7 cm wide.

**RESOLUTION.** At printed size, graphics must be 300 dpi for color art and images containing photographic material, 600 dpi for grayscale art, and 1200 dpi for black and white line art. The resolution requirements are essential for producing high-quality graphics within the published manuscript. Graphics submitted at lower resolutions may be used; however, graphics that do not meet stated resolution requirements may appear at a lower quality in the final output.

**TITLES, FOOTNOTES, CAPTIONS, LEGENDS.** Schemes may have titles and footnotes. Figures must have captions. To save space, place legends for graphs within the main body of the graphic, whenever possible.

**ASSISTANCE.** Authors may want professional assistance with improving the English, figures, or formatting in their manuscript before submission. ACS ChemWorx Authoring Services can save you time and improve the communication of research in your manuscript. You can learn more about the services offered at [http://es.acschemworx.acs.org](http://es.acschemworx.acs.org).

**Content-Specific Details**

**TITLE.** Titles should clearly and concisely reflect the emphasis and content of the paper and be accessible to a broad audience. Do not use trade names of drugs or abbreviations. Serial numbers may be used only if consecutive papers appear in the same issue of *Biochemistry*.

**AUTHOR LIST.** Include all individuals who have made substantial contributions to the work. To facilitate indexing and retrieval and for unique identification of an author, use first names, initials, and surnames (e.g., Katherine M. Jones) or first initials, second names, and surnames (e.g., K. Mary Jones). Additionally, authors are encouraged to register for an ORCID iD. At least one author must be designated with an asterisk as the person to whom correspondence should be addressed. *Biochemistry* allows for the designation of multiple first authors.

**ABSTRACT.** All Communications, Research Articles, From the Bench, and Perspectives contributions should contain an abstract. The Abstract should, in fewer than 250 words, succinctly present the problem studied, the experimental approach
employed, and the major findings, conclusions, and significance of the work. The Abstract should be self-explanatory and suitable for direct reproduction. Footnotes or undefined abbreviations may not be used.

**INTRODUCTION.** The Introduction should state the motivation for the investigation and its relationship to other work in the field. Extensive reviews of the literature should be avoided. The last paragraph of the introduction should summarize the major findings, conclusions, and significance of the work, without reproducing the abstract. The Introduction has no header.

**MATERIALS AND METHODS.** Materials and experimental details should be described in sufficient detail to enable others to repeat the experiments. UniProt Accession IDs and/or protein IDs ([http://www.uniprot.org/](http://www.uniprot.org/)) should be provided for all proteins that are purified and/or characterized. Names of products and manufacturers should be included only if alternate sources are deemed unsatisfactory. Articles reporting data from experiments on live animals must include a statement identifying the approving committee and certifying that such experiments were performed in accordance with all national or local guidelines and regulations. Results from experiments involving humans or tissue samples must additionally include a statement that informed consent was obtained from the subject or from the next of kin. Novel experimental procedures should be described in detail, but published procedures should merely be referred to by literature citation of both the original and any published modifications. In submitting a manuscript to *Biochemistry*, authors agree to make available to interested academic researchers for their own use any materials reported in their manuscript that are not otherwise obtainable. Such requests should respect the purpose for which an author has prepared the materials being requested in order to avoid conflicts of competition with the originating laboratory.

**Accession Codes.** In addition to including the UniProt Accession IDs for all proteins that are purified and/or characterized in the Materials and Methods section, manuscripts reporting the assignment of *in vitro* activities and/or *in vivo* physiological functions, e.g., roles in metabolic pathways, of proteins/enzymes should include a section at the end of the manuscript (Accession Codes) with a list of the UniProt accession IDs for all of the characterized enzymes/proteins. This information can be used by UniProt to update/correct its functional annotations, thereby enhancing the quality of automatic functional assignments that are made when genome sequences are deposited. Authors also are encouraged to submit functional annotations directly to UniProt: see [http://www.uniprot.org/help/submissions#guidelines](http://www.uniprot.org/help/submissions#guidelines) and [http://www.uniprot.org/update](http://www.uniprot.org/update).
**Hazardous Procedures.** Authors must emphasize any unexpected, new, and/or significant hazards or risks associated with the reported work. This information should be in the experimental details section of the full article or communication.

**RESULTS AND DISCUSSION.** Results should be presented concisely. Tables and figures should be referred to directly, and data should be presented in only one figure or table. In the interest of economy of space, Supporting Information (also subject to review) should be submitted as a separate file. The discussion should interpret the results, relate them to existing knowledge in the field, and clearly state their significance. To conserve space, please submit supplemental information as a single PDF as Supporting Information for Review. The Results and Discussion sections in Research Articles may be combined into a single section or described separately.

**Kinetic and Equilibrium Data.** Authors are referred to the STRENDA (Standards for Reporting Enzymology Data) Commission of the Beilstein Institut (https://www.beilstein-strenda-db.org/strenda/) for detailed guidelines on how this data should be organized and formatted. For publication in *Biochemistry*, steady-state, pre-steady-state, or approach-to-equilibrium kinetic data and equilibrium binding data for proteins, nucleic acids, and other species must include a description of the identity of the catalyst or binding molecule, its origin, purity of composition, and any modifications such as mutations, post-translational modifications, or any other modifications made to facilitate expression and purification. The assay method and the exact experimental assay conditions must be provided as a reference to previous work, with or without modifications, or fully described if a new assay. Regardless of whether previously reported, the temperature, pH, and pressure (if other than atmospheric) must be included. Terms such as “not detectable” (ND) should be avoided. Instead, an estimate of the limit of detection based on the sensitivity and error analysis of the assay should be provided. First-order and second-order rate constants (including steady-state values of $k_{\text{cat}}$ and $k_{\text{cat}}/K_M$ for enzymes and nucleic acids) should be reported in units of s$^{-1}$ and M$^{-1}$ s$^{-1}$, respectively. Equilibrium constants describing a binding interaction should be reported as equilibrium dissociation constants with units of concentration (e.g., M, mM, μM, etc.). Steady-state enzyme activity (specific activity) should be optimally reported as $k_{\text{cat}}$ or, if there is uncertainty in the molar concentration of the catalyst, as a $V_{\text{max}}$ (e.g., nmol, μmol) of product formed per amount of protein per unit time. All reported parameters should be given with a calculated estimate of error and a description of the software used in the data analysis.
Sequence Data. We ask that all authors submit sequence data to a public repository prior to submission and include accession numbers in their paper where appropriate. Examples of suitable public repositories for DNA and RNA sequences include GenBank or Protein DataBank; nucleic acid sequencing data can be deposited in NCBI Trace Archive or NCBI Sequence Read Archive (SRA). Protein sequences can be submitted to Uniprot.

Structural Data. The atomic coordinates and related experimental data (structure factor amplitudes/intensities and/or NMR restraints) associated with a structure reported in Biochemistry must be deposited at a member site of the Worldwide Protein Data Bank (www.wwpdb.org): RCSB PDB (www.pdb.org), PDBe (www.ebi.ac.uk/pdbe), PDBj (www.pdbj.org), or BMRB (www.bmrb.wisc.edu). The PDB ID should be included in the manuscript. Authors must agree to release the atomic coordinates and experimental data when the associated article is published. Questions relating to depositions should be sent to deposit@wwpdb.org. A manuscript will be accepted only after receipt from the submitting author of a written statement that the coordinates have been deposited. Coordinates must be released immediately upon publication.

Manuscripts that report X-ray crystallographic structures should include a table of data statistics that contains the number of reflections, data cutoff (e.g., \( F > 0 \)), \( R_{\text{work}}/R_{\text{free}} \), \( \| \sigma (I) \| \), percent completeness, redundancy, \( R_{\text{merge}} \), number of atoms per asymmetric unit, and \( B \)-factors for protein, waters, and ligands/ions. For papers that involve NMR studies in which complete or nearly complete resonance assignments of biopolymers have been carried out, authors are required to deposit relevant NMR assignments and related experimental data at the BioMagResBank (BMRB; http://www.bmrb.wisc.edu). These data may include assigned chemical shifts, coupling constants, relaxation parameters \( (T_1, T_2, \text{and NOE values}) \), dipolar couplings, or other data accepted by BMRB. The author is responsible for obtaining a BMRB entry accession number (e.g., 4238), which should appear in a data deposition paragraph. The data must be released upon publication.

Crystal structures of nucleic acids should be deposited with the Nucleic Acid Database (NDB; http://ndbserver.rutgers.edu/ or with the RCSB PDB at http://www.rcsb.org/pdb/home/home.do. A preprint of the related manuscript should be mailed or faxed to The Nucleic Acid Database, Department of Chemistry, Rutgers, The State University of New Jersey, 610 Taylor Road, Piscataway, New Jersey 08854-8087 [fax (732) 445-4320].
For papers describing structures of biological macromolecules from electron microscopy experiments, the 3D map should be deposited at either the Protein Data Bank in Europe (UK) or RCSB (USA) EMDB deposition site (http://www.emdatabank.org/). Once the map has been deposited, any fitted atomic coordinates should be deposited with the Protein Data Bank (PDB) by following the link provided from the EMDB deposition session. The EMDB and PDB IDs should be included in the manuscript. Both the map and the coordinate data will be made public when the associated article is published. Manuscripts dealing with the development of structures from sequence homology are generally not considered unless significant experimental tests of the model also are presented.

**Target-based Screening.** Bioactive molecules identified through target-based and/or phenotypic screening assays should include thorough structure-activity relationship (SAR) characterization and detailed biophysical testing for functional validation and artifactual assay activity. Counterscreens for irreversible inhibition as well as nonspecific activity by pan-assay interference compounds (PAINS) should be performed. Full concentration response curves, binding constants, compound stability and purity should be measured and reported for all compounds of interest. Screening hits should be reviewed for resemblance to known PAINS chemotypes, either using in silico tools (found [here](http://www.emdatabank.org/)) or through careful literature review.

**ACKNOWLEDGMENT.** Acknowledgments in this section should include technical assistance, advice from colleagues, and gifts of reagents or materials. Prior permission must be obtained from persons whose contribution to the work is acknowledged in the manuscript.

**REFERENCES.** References should clearly identify the original contributor to the work being cited. The number of references should be appropriate for the scope of the work. Excessive references should be avoided. All references should be compiled into a list at the end of the manuscript and must be verified by the author for accuracy. Literature references should be numbered with Arabic numerals in the order of their first citation in the text and the corresponding superscripted numbers inserted at the appropriate locations in the text. Please follow the referencing style provided in these examples: Wegner, A. (1979) Equilibrium study of the actin–tropomyosin interaction, *J. Mol. Biol.* 131, 839–853. Kossiakoff, A. A., and Spencer, S. A. (1981) Direct determination of the protonation states of aspartic acid-102 and histidine-57 in the tetrahedral intermediate of the serine proteases: neutron structure of trypsin, *Biochemistry* 20, 6462–6474. Johnson, G. L., Mac Andrew, V. I., and Pilch, P. F. (1981) Identification of the glucagon receptor in rat liver membranes by photoaffinity cross-linking, *Proc. Natl. Acad. Sci.*
U.S.A. 78, 875–878. All manuscript types should follow this reference format and include manuscript titles plus inclusive pagination. Titles of journals are abbreviated according to Chemical Abstracts Service Source Index. Serial publications such as Advances in Protein Chemistry, Methods in Enzymology, and The Proteins should be listed in the same form as journals. References to chapters and monographs are listed as follows: Fierke, C. A., and Hammes, G. G. (1996) Transient Kinetic Approaches to Enzyme Mechanisms, in Contemporary Enzyme Kinetics and Mechanism (Purich, D., Ed.) 2nd ed., pp 1–35, Academic Press, New York. Cite papers that have been accepted for publication as “in press” and supply their DOI numbers whenever possible. Papers that are in preparation or have been submitted but not yet accepted cannot be cited.

TABLES. Tables should be included only when the data cannot be presented clearly otherwise. Tables should be numbered consecutively with Arabic numerals. Provide a brief title for each table and a brief heading for each column. Clearly indicate the units of measure (preferably SI). Data should be rounded to the nearest significant figure. Give standard deviations if appropriate. Explanatory material referring to the whole table is to be included as a footnote to the title. Table footnotes are always identified by superscript letters, lowercase and italicized. All tables and figures should be cited in the text. All tables must be included in the source manuscript file and not uploaded separately as graphics.

FIGURE LEGENDS. The legend should include the figure number and a brief description, preferably one or two sentences or descriptive phrases. It should be understandable without reference to the text and should not include new material that is not in the text. Explain all symbols and abbreviations used in the illustrations. Simple symbols such as O, 9, and 4 should be used. The use of error bars on the data points is recommended. Figure legends must be included in the manuscript source file.

TOC GRAPHIC. This illustration should capture the reader’s attention and, in conjunction with the manuscript title, provide the reader with an immediate visual description of the manuscript’s most important results and significance. The graphic should be in the form of a structure, graph, drawing, electrophoresis gel, or reaction scheme. Authors must submit a graphic in the actual size to be used for the table of contents (TOC) that will fit in an area 1.75 in. high and 3.5 in. wide (3.5 cm × 8.9 cm). Larger images will be reduced to fit within those dimensions. Type size of labels, formulas, or numbers within the graphic must be legible. Tables or spectra are not acceptable. Color is encouraged. Authors must provide the TOC graphic upon
submission of the paper as the last page of the manuscript. Authors should label this page “For Table of Contents Use Only” and include the manuscript title and authors.

**SUPPORTING INFORMATION.** This information is sent to reviewers during the peer-review process and is available to readers of the published work. For clarity, a cover page with the title and authors should be included, the copy should be clean and readable, and the pages must be numbered. A Table of Contents should be included if the Supplementary Information is extensive. Supporting Information must be submitted simultaneously with the manuscript and uploaded on the ACS Paragon Plus website. A list of acceptable file types is available here. All Supporting Information files of the same type should be prepared as a single file (rather than submitting a series of files containing individual images or structures). For example, all Supporting Information available as PDF files should be contained in one PDF file. The Supporting Information format of this journal can accommodate and make readily available almost any type of supplementary figures or data (e.g., reproductions of spectra, experimental procedures, tabulated data, or expanded discussion of peripheral findings). Include a paragraph at the end of the paper indicating the nature of the material in each file and the means by which an interested reader may obtain copies directly.

**Biochemistry: Peer Review Process**

**Preliminary evaluation**
Every manuscript submitted to *Biochemistry* undergoes an initial editorial assessment to ensure that it contains sufficient elements of novelty, breadth, and impact to appeal to the broad biological chemistry readership. Submissions that are judged to lack these elements are returned without extensive review.

**Review process**
Manuscripts evaluated beyond this initial assessment are reviewed by at least two independent experts, who return written comments, transmitted faithfully to the author, typically within 4 weeks (2 weeks for Communications). Reviewers are expected to disqualify themselves if their evaluations could be marred by even an appearance of a conflict of interest, such as a prior or current association with the laboratory of the author or a preconceived opinion about the work. Authors are required to recommend at least four experts who could offer expert and unbiased reviews and are not members of the Editorial Advisory Board. Authors may also identify in their cover letter as many as three individuals who should be excluded from the potential reviewer pool; these exclusions must be accompanied by an explanation. Members of the Editorial Advisory
Board cannot be disqualified from participating in the final disposition of a manuscript. The reviewers are advisory to the Editor, and their reports are used to reach the editorial decision. If the reviewers disagree, or if in the judgment of the Editor the manuscript has not received adequate consideration, the manuscript and the reviewers’ opinions may be submitted to a member of the Editorial Advisory Board for arbitration. Editorial decisions that result from this process are considered final. Reviews will normally be sent to authors by e-mail unless the authors request otherwise.

Revisions
Revisions, when necessary, should be returned as quickly as possible, but certainly within 1 month for major revisions and 2 weeks for minor revisions, and only one revised version of a submitted manuscript is typically considered. A revised manuscript received after these time periods will be considered a new submission and will usually undergo a new review process. When a manuscript is returned to the author for revision, the author should reply as fully as possible to the specific recommendations of the reviewers. The revised manuscript should be submitted with a rebuttal letter that states explicitly how and where each recommendation has been addressed and the reason for disregarding any recommendation and must be accompanied by an annotated copy of the revised manuscript that identifies where changes were made. This annotated manuscript should be submitted as Supporting Information for Review Only. Handwritten corrections will not be accepted.

Just Accepted Manuscripts
Just Accepted manuscripts are peer-reviewed, accepted manuscripts that are posted on the ACS Publications website prior to technical editing, formatting for publication, and author proofing—usually within 30 minutes to 24 hours of acceptance by the editorial office. During the manuscript submission process, authors can choose or decline to have their manuscript posted online as a Just Accepted manuscript and should take this choice into account when planning intellectual property and patent activities related to a manuscript. To ensure rapid delivery of the accepted manuscript to the Web, Authors must adhere carefully to all requirements in the journal’s author guidelines. For further information, please refer to the Just Accepted FAQ, at http://services.acs.org/pubshelp/passthru.cgi?action=kb&item=244. Note that publishing a manuscript as Just Accepted is not a means by which to comply with the NIH Public Access Mandate.

Manuscript Transfer
If your submission is declined for publication by this journal, the editors might deem your work to be better suited for another ACS Publications journal and suggest that the authors consider transferring the submission. Manuscript Transfer simplifies and
shortens the process of submitting to another ACS journal, as all the co-authors, suggested reviewers, manuscript files, and responses to submission questions are copied by ACS Paragon Plus to the new draft submission. Authors are free to accept or decline the transfer offer.

Once a transfer is accepted, authors will then complete the submission to the new journal in ACS Paragon Plus. During the submission process, they will have the opportunity to revise the manuscript and address comments received from editors or reviewers. Requirements of the new journal may be different, so authors should also check the author guidelines for the new journal and make any needed revisions in order to conform to those requirements. Please keep in mind that the reviews, reviewer identities, and decision letter will all be transferred to the new journal. Authors are encouraged to identify changes made to the manuscript in a cover letter for the new journal.

Note that transferring a manuscript is not a guarantee that the manuscript will be accepted, as the final publication decision will belong to the editor in the new journal. For complete details, see http://pubs.acs.org/page/policy/manuscript_transfer/index.html.

Proofs
Authors are fully responsible for the correction of galley proofs. The corresponding author of an accepted manuscript will receive e-mail notification and complete instructions when page proofs are available for review via a secure Web site. Authors can access their proofs on a secure Web site within ACS ChemWorx using an ACS ID. To obtain an ACS ID or to reset your ACS ID password, go to http://www.acschemworx.acs.org. The PDF proof made available for review is publication quality so that authors can see a true representation of both the text and the graphics prior to publication. Page proofs should be checked carefully against the manuscript (in particular, all tables, figures, structures, captions, equations, and formulas, as well as clarity of the graphics), as this is not done by the Journal Publications office, and the corrections should be returned as soon as possible and certainly within 48 hours. Alterations to page proofs should be restricted to serious changes in interpretation or corrections. The addition of new data is not permitted at the page-proof stage. Extensive changes, including changes to the title or list of authors, are subject to Editorial review. It is the responsibility of the corresponding author to ensure that all authors listed on the manuscript agree with the changes made on the proofs. No paper will be released for publication until the author’s changes have been made or the author’s approval has been received.
ASAP Publication

Once corrected proofs have been returned and all author concerns are resolved, accepted manuscripts will be published on the “Biochemistry ASAP” web page. Publication on the “Biochemistry ASAP” web page usually occurs within three working days after corrected page proofs are received, and anywhere from two to four weeks prior to the cover date of the issue. Authors who decline the Just Accepted option should take the ASAP schedule into account when planning intellectual and patent activities related to a manuscript. The actual date on which an accepted paper is published on the Web is recorded on the Web version of the manuscript and on the first page of the PDF version.

ACS Policies for E-prints and Reprints

As defined by the ACS Articles on Request policy, the Society will provide (free of charge) to all contributing authors a unique URL within the ACS website that they may e-mail to colleagues or post on external websites. These author-directed links are designed to facilitate distribution of an author’s published work to interested colleagues in lieu of direct distribution of the PDF file by the author. The ACS Articles on Request policy allows 50 downloads within the first year after publication and unlimited access via the same author-directed links for 12 months after publication. Upon receipt of the proof of their paper, authors will receive a link to a website where they may order author reprints. They may also call Cierant Corporation at (866) 305-0111 from 9AM to 5PM EST. Reprints will be shipped within two weeks after the issue publication date. Neither the Editors nor the Washington ACS Office keeps a supply of reprints; requests for single copies of papers should be addressed to the corresponding author of the paper concerned.

Prior Publication Policy/Preprint Servers

Biochemistry authors are allowed to deposit an initial draft of their manuscript in a preprint service such as ChemRxiv, arXiv, or bioRxiv. Please note any use of a preprint server in the cover letter, and as appropriate, state how the manuscript has been adjusted/updated between deposition and submission. All other prior/redundant publication is forbidden. Upon publication in Biochemistry, authors are advised to add a link from the preprint to the published paper via the Digital Object Identifier (DOI).

ACS AuthorChoice Open Access

Open access options are available under the ACS AuthorChoice program for all ACS journals. Authors, institutions, or funding agencies can provide open access for any article that has been peer-reviewed by paying an article publishing charge once the article has been accepted for publication. The ACS offers a wide range of options,
including the ACS’ license, ACS AuthorChoice (a noncommercial reuse license), and Creative Commons license options CC-BY and CC-BY-NC-ND. The ACS also offers the option to choose immediate open access or delayed open access (12 months delayed at a reduced price). With open access, authors can request that the ACS deposit the final published article to funder or government repositories, such as PMC, European PMC, and DOE PAGES. For more information, see http://pubs.acs.org/page/4authors/authorchoice/index.html.

To purchase open access, ACS authors should first sign the Journals Publishing Agreement prior to acceptance. After an article has been peer-reviewed and if it is accepted, the corresponding author receives an email from the ACS with instructions and a link into the Copyright Clearance Center’s RightsLink ecommerce system to choose and purchase an open access license. For some funders, special arrangements have been made, and alternate processes may be provided in the email to the corresponding author (see http://pubs.acs.org/page/4authors/funder_options.html for details). Significant discounts are available for authors who are affiliated with an All Publications subscribing institution and for ACS members. For assistance with open access, please contact support@services.acs.org.
