Scope and Editorial Policy
The *Journal of Natural Products* invites and publishes papers that make substantial and scholarly contributions to the area of natural products research. Contributions may relate to the chemistry and/or biochemistry of naturally occurring compounds or the biology of living systems from which they are obtained. Specifically, they may be articles that describe secondary metabolites of microorganisms, including antibiotics and mycotoxins; physiologically active compounds from terrestrial and marine plants and animals; biochemical studies, including biosynthesis and microbiological transformations; fermentation and plant tissue culture; the isolation, structure elucidation, and chemical synthesis of novel compounds from nature; and the pharmacology of compounds of natural origin. When new compounds are reported, manuscripts describing their biological activity are much preferred.

Manuscript Submission
Manuscripts should be submitted via the secure ACS Paragon Plus Web site via the Journal home page. All pages of the manuscript should be numbered and double-spaced. Hard copy submissions to the *Journal of Natural Products* have been discontinued.

Manuscript Categories
Manuscripts may be submitted as Rapid Communications, Full Articles, Notes, or Reviews. Authors should indicate in a cover letter accompanying the manuscript which category they intend for their submission.

All manuscripts will be submitted to a review process. Manuscripts will be considered for publication on the understanding that they have not been published or submitted for publication elsewhere.

Rapid Communications. Rapid Communications are intended for the publication of exceptionally significant findings including unusual structures, bioactivities, and advances in separation technology or spectroscopy. The goal will be to have the Rapid Communication in print three months from the date of receipt by the Editor. Authors should provide a justification statement with manuscripts they wish to have considered for rapid communication. Such manuscripts should be no longer than six pages, double spaced, with emphasis on results and with brief, untitled introduction and experimental sections. Full experimental details should be reserved for a subsequent Full Article to be submitted to the Journal. The editors will decide whether or not the work merits rapid publication.

Full Articles. Full Articles are comprehensive, critical accounts of work in the areas outlined above.

Notes. Notes are abbreviated papers presented in the same general style as Full Articles. Generally, studies that are narrower in scope than published in Full Articles are reported as Notes. When only one or two new compounds are reported in a manuscript, these substances must be of significant structural, biogenetic, and/or biological interest. The publication of known
compounds will be considered only if they have been demonstrated to possess potentially important bioactivity. Manuscripts solely reporting NMR assignments or X-ray crystallographic data of known compounds will not be considered. For known compounds, authors should submit full experimental details of the isolation and identification data for consideration by the referees but not for publication. Full details of the isolation and identification procedures may be made available to the reader as Supporting Information. (See the subsequent section on Supporting Information.)

Authors investigating the chemistry of a single species should aim to publish their results in a single manuscript rather than in a series of manuscripts describing each new compound as it is found. Manuscripts that report fragmentary parts of a larger study will be returned to the authors at the Editors’ discretion.

Reviews. Unsolicited Review articles may be considered for publication after prior submission of a synopsis or outline.

ASAP Web Publishing

Notice: Accepted manuscripts will be published on the “Articles ASAP” page on the Journal Web site as soon as page proofs are corrected and all author concerns are resolved. Publication on the Web usually occurs within 4 working days of receipt of page proof corrections. Manuscripts assigned to a special issue may remain published ASAP for several months. Authors should take this schedule into account when planning intellectual and patent activities related to a manuscript. The actual date on which an accepted paper is posted on the Web is recorded on the Web version of the manuscript and on the first page of the PDF version. Once a document is published on the Web, the corresponding published issue cannot be changed.

Conflict of Interest Disclosure

A statement describing any financial conflicts of interest or lack thereof is published with each manuscript. During the submission process, the corresponding author must provide this statement on behalf of all authors of the manuscript. The statement should describe all potential sources of bias, including affiliations, funding sources, and financial or management relationships, that may constitute conflicts of interest (please see the [LINK: http://pubs.acs.org/ethics| ACS Ethical Guidelines]). The statement will be published in the final article. If no conflict of interest is declared, the following statement will be published in the article: “The authors declare no competing financial interest.”
