Olin Mathieson adjusts supply to demand

During the recent methanol shortage Olin Mathieson was able to increase production from one car per day to ten cars in 24 hours...able to ship a loaded barge in 48 hours. That's because the Morgantown Plant is engineered for maximum flexibility of output...to supply either ammonia or methanol against demand.

Where else can you get this protection that assures your supply of methanol?

If your production depends upon a dependable supply of methanol, it will be to your advantage to talk over your requirements with an Olin Mathieson representative soon. Call the nearest office or write today.
