Extra Values in Phenolics with QO® FURFURAL

Phenolic molding powders made with QO furfural bring extra values to molders. Depending on how the compound supplier uses furfural, his customers get a range of useful properties not otherwise so readily achieved. For instance:

- Superb flow properties. Furfural modified phenolics flow so well that even large intricate moldings are practical to make.
- Fast cure. Addition of furfural plasticyizes phenolics to the degree that highly advanced fast curing resins become practical for molding compound use.
- Excellent electrical properties and good chemical resistance also characterize furfural phenolics.

No wonder resin producers use QO furfural.
