Chalk up 2 more additions to the line of Skelly Chemicals... acetone and phenol

Skelly is increasing their line of chemicals used in the production of plastics, synthetic fibers, dyes, paints, fertilizers, insecticides, detergents, adhesives, pharmaceuticals and many other products.

The highly-automated facilities now being constructed at El Dorado, Kansas, will make use of petroleum from Skelly's own oil wells, carried through Skelly's own pipeline to Skelly's own oil refinery, and to Skelly's new phenol and acetone processing plant.

Skelly Acetone and Skelly Phenol are offered exclusively by R. W. GREEFF & CO., 10 ROCKEFELLER PLAZA, NEW YORK 20, NEW YORK. We would welcome the opportunity to tell you more about the advantages that Skelly has to offer.
