The thiol radical. It's giving a radical boost to crop production around the world. Producing a wide range of useful biological activity in herbicides, insecticides, nematicides, many other compounds.

And for each crop and climate, the right active molecule has to be selected. So a variety of organosulfur building blocks may be needed. That's why we make such a complete range of alkyl mercaptans. In quantities to meet growing demand.

Mercaptans of the type made by Pennwalt are essential to many other syntheses as well. Which is also why we're the world's largest mercaptan producer, with plants in the United States and Europe. We were ready with the capacity when it was needed originally and have consistently expanded our facilities ever since.

We can talk mercaptans with you anywhere ... from offices in Europe and Japan and throughout the U.S.A. Contact any of the locations listed below, or write for our literature. Indchem Division, Pennwalt Corporation, Three Parkway, Philadelphia, Pa. 19102.
