This year, thousands of children will find out they have leukemia.

Companies like yours around the world are engaged in the battle against cancer. ChemSyn is proud to assist in this fight. With years of experience in anti-cancer bulk active manufacturing, we’ve helped many pharmaceutical companies in their efforts to develop new, more effective cancer-fighting drugs. We provide a wide range of services to our customers including process development and scale-up, process validation, custom radio-synthesis and bulk manufacturing under cGMP.

To meet the growing number of new anti-cancer drugs in development, we are expanding our capability to manufacture cytotoxic and other highly potent compounds. Specialized containment facilities and isolation suites are under construction at our FDA inspected and approved facilities.

Sure, we do what we do because it makes our business successful. But, really, knowing that the work we do may help save lives and keep families together gives us all the incentive we’ll ever need.

"See us at the 1998 AAPS Meeting in San Francisco, Booth # 1634."
